

Shared Health is Manitoba's provincial health authority, providing provincial planning, health services and operational support for Manitoba's health system.

The Shared Health **Learning Management System (LMS)** is an online application for the administration, documentation, tracking and reporting of instructor-led and online courses.

<https://sharedhealthmb.learnx.net/include/login.asp>

Health-care staff working in the following Service Delivery Organizations (SDOs) in Manitoba use the LMS:

- Cancer Care Manitoba
- Interlake-Eastern RHA
- Northern Health Region
- Prairie Mountain Health
- Shared Health
- Southern Health-Santé Sud
- Winnipeg RHA

The Service Delivery Organizations include public health-care facilities, programs and services across hospitals, personal care homes, community clinics, support agencies and other organizations. Health System Transformation continues to evolve and grow bringing new health agencies into the service delivery scope each year.

LMS Accounts

Staff create their own LMS account using a work provided email address. To view the current list of email domains recognized for account creation through self-service, [click here](#). If a work provided email is not available, does not have a local domain or is not in scope for self-creation, there are several options to gain access to the LMS and/or the learning within.

Generic LMS Access

Generic account access to the LMS can be used to facilitate training for individuals who do not have a work email address (e.g. volunteers, outside agencies). Generic accounts allow access to a curated selection of courses without individual tracking or reporting available in the LMS. Access to generic accounts may be terminated, at any time and without notice, due to changes in policy, licensing, or technology. There is no guarantee that this service will be available indefinitely.

Group Sessions

Managers and Educators may use their own LMS account or the generic account to conduct a group session for any eLearning offered in the LMS if staff do not have an account. There will be no individual tracking or reporting available in the LMS if using this method.

Sharing Courses

With approval from the course owner, CTS will share the course files for courses built in house with educational institutions and other health agencies for use in their own Learning Management Systems. This includes the SCORM file with no option to modify the course.
